E- Governance

POLICY ON E- Governance

Introduction:

The 'E' in E-governance stands for electronic, and E-governance refers to the use of information technology to govern. The growing desire for administrative transparency, faster information flow, and other demands that E-governance can meet. The goal of e-governance implementation is to improve governance. Participation, transparency, and accountability are all characteristics of good government.

Benefits of E-Governance:

E-governance is an important instrument for the institute's governing body. In general, it benefits the administration in the following ways:

- Faculty and student empowerment, as well as encouragement of their participation in the governance process.
- Transparency and clarity in the administration, governance, and admissions processes are essential.
- Improve the efficiency of the faculty and administrative processes.

E-Governance leads to multiple advantages to Higher Education:

- At ALIET, the usage of E-governance will foster a great help to the students and parents to acquire information about any course in the departments, or government policy and participate in the decision-making process.
- E-governance is designed to make administration, examination, finance, student admission and support relevant in the digital era.
- Students and parents can have their work done online instead of having to visit to the respective offices if e-Governance procedures are properly implemented.
- Successful application of e-Government practises results in improved service delivery to students. The timeliness or relevancy of the material being delivered may be enhanced by its accessibility and rapid dissemination.
- Multimedia materials, such as videos, can be used to supplement regular course content.
- It's a great way for alumni to stay connected to the school, universities, and the rest of the world.

Conclusion:

IT has now become a vital element of people's lives all across the world. It is now time to put your skills to work for the advancement of India's educational system. We need security for smooth information flow, a best-practice database, and increased capacity for data analysis, among other things. It necessitates the development of entirely new infrastructure, procedures, rules, and job abilities. For the creation and collection of internet data, electronic governance has become a reality as a result of technological advancements.
